

# Concrete Cutting & Sawing

If your concrete project requires core drilling and sawing, the J.W. Lindsay Concrete Core Drilling and Sawcutting crew is at your service 24 hours a day.

We have the trained staff, technical expertise and state-of-the art equipment to handle both small and large jobs—whether it's drilling one core or 1000... sawcutting 10 linear feet of concrete or 10,000... working on bridge decks or parking lots. With three state-of-the art electric concrete saws, we can work inside without the usual fume problems.

Our less-than-you-expected rates and in-depth knowledge of the complete construction process gives you the confidence of knowing your next project will be handled safely, professionally and according to your schedule.

**“the work was always handled in a very professional manner. They were always on site and on time whenever we needed them, even with short notice. I have never had a complaint or a call back regarding any jobs that Lindsay did for us in the past 10 years.”**
