

For a faster, more cost-effective way to build, many of Atlantic Canada's larger construction projects have turned to J.W. Lindsay's Design-Build team. From concept development to effective design, budgeting and construction, our Design-Build methods have been the preferred construction process for distribution centres, sports arenas, cooler/freezer facilities, multi-tenant buildings, automotive dealerships and industrial plants.

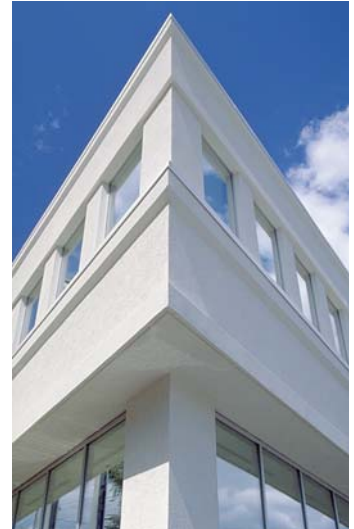

Why Lindsay Design-Build?

- Our designers are the best in the construction business. They combine creativity with practicality. They know what works and what won't...which features cost more and which features save more. And they have a thorough appreciation for budgets, construction schedules and functionality.

(continued on reverse)

“Lindsay did a fantastic job.”

– Robert Levine
Fire Chief and Public Works Manager, Town of Truro

- We can guarantee a firm price without a full set of drawings thus eliminating the need to be locked into finished plans and specs.
- The project can easily be fast-tracked. We can start the earthwork and foundation on a building while waiting for the finalized electrical drawings or interior finish schedules.
- We assume full responsibility and liability for the design documents.
- Our hands-on Design-Build approach helps us lead the way with such advanced techniques as tilt-up concrete construction, RBS, and pre-engineered metal buildings — allowing earlier occupancy, more effective material procurement and greater cost efficiencies.
