

At Lindsay, we are proud to be a “leading edge” contractor known for introducing Metal Buildings, Tilt Up and new roofing technologies to the region. Following this trend we provide to Atlantic Canada the ultimate wall system, the **Royal Building System (RBS)**.

This patented wall system is comprised of solid concrete, encased in rigid and durable polymer forms that become the finished wall for a superb interior and exterior finish. This system is ideally suited to commercial, industrial, institutional, and agricultural construction and can be modified to fit any dimensions with its modular wall components. It is quickly assembled on site and can include built-in insulation. The RBS system is very energy efficient, won't support mold or mildew, and its moisture resistance makes for easy wash-down.

**RBS 8i Insulated Wall**

“Once Lindsay introduced us to RBS we were convinced of its benefits for its durability, low maintenance, and aesthetically pleasing exterior. Lindsay did a great job for us.”
