

Lindsay is at the forefront in the installation of tilt-up concrete buildings throughout Atlantic Canada.

The beauty of the tilt-up building system is in its simplicity. Formwork for wall panels is built on the building floor slab at the building site, concrete is poured and the finished panels are erected and secured.

Using tilt-up concrete, we produce buildings with award winning aesthetics, outstanding durability and surprising economy.

Tilt-up concrete provides beauty, sophistication, durability, and maintenance-free wall systems (*as well as lower insurance rates!*).

(continued on reverse)

“Construction went very well – we were very impressed with Lindsay’s attention to detail.”

– Mark Northrup *Owner, Leon’s*

With the speed of tilt-up construction, we can have our client hosting the grand tour of their new facility sooner than if conventional construction methods were used.

So whether you're in search of a customized wall surface, or just want the performance that only concrete can bring, tilt-up is the best choice. Our team has a proven track record in successful installation of some of the most creative tilt-up projects in Atlantic Canada.
